Abhijeet Kumar Prajapati

Software Developer | B.Tech Information Technology (2026)

abhijeet943935@gmail.com | github.com/Abhijeet-Kumar-Prajapati | Katras, Jharkhand, India

PROFILE

Software developer and B.Tech Information Technology student graduating in 2026. I build complete, runnable applications - offline-first desktop and web software that works without an account, a cloud service or an API key. Eleven public projects, most with zero external dependencies and no build step. Comfortable across Python, JavaScript and Java, with hands-on experience in WebGL, Windows scripting and cross-platform desktop packaging.

EDUCATION

Bachelor of Technology - Information Technology 2022 - 2026

Vinoba Bhave University (VBU), Hazaribagh

CGPA 6.3 / 63% | Hazaribagh, Jharkhand

SKILLS

Languages	Python (90), JavaScript (88), Java (72), PowerShell (70)
Frontend	HTML (92), CSS (85), WebGL / Three.js (70)
Currently learning	C, C++, SQL
Tools	Git and GitHub (85), VS Code (90), Windows (88)

AT A GLANCE

11	5.6 MB	320+	0
projects shipped	code published	tests passing	dependencies

SELECTED AND SHIPPED PROJECTS

Language composition is measured from the source code via the GitHub languages API, not estimated.

Olmavax A.I

Python 57, JavaScript 30, CSS 9, HTML 3

Local-first multi-agent AI workspace

Nine agents, 19 local plugins, 22-language syntax highlighting, voice input, PDF export, a from-scratch QR encoder and an optional 27-module Python sidecar. Zero npm dependencies; works with no API key.

PyLab Studio

Python 70, JavaScript 13, HTML 12, CSS 5

132 Python programs in one project

132 programs across 9 categories, each runnable from a console menu, a local website or a live web demo.

AETHER STUDIO

JavaScript 76, HTML 12, CSS 12

Procedural 3D and 4D animation

A WebGL studio combining keyframed 4D animation and rigid-body physics on one render loop. All geometry, skinning and motion generated at runtime - no models, textures or build step.

Campus Nexus

JavaScript 82, HTML 10, CSS 8

Library, store and arcade in one app

Four separate student projects merged into a single application sharing one login, with a dashboard and a role-based security centre.

CodeLite

JavaScript 55, HTML 23, CSS 9, PowerShell 8

Offline code editor for Windows

A fully offline code editor with an installer. No telemetry, no accounts, no tracking.

Java Practice Programs

Java 50, HTML 28, PowerShell 22

40 Java programs with automated CI

DSA and OOP programs covering sorting, graph traversal, Dijkstra, Kruskal, Huffman, inheritance and exception handling. CI compiles and runs all 40 on every push.

APM Open Player

JavaScript 68, Java 13, HTML 11, CSS 5

One player, every format, every platform

A universal media player for Windows, macOS and Android, combining the strengths of VLC, MX Player and KM Player.

Work Hub

HTML 29, Python 28, JavaScript 23, CSS 19

Every project in one dashboard

Scans and launches every project on the machine from a single local-only dashboard.

GameVault

JavaScript 54, HTML 35, CSS 11

Mobile gaming platform

Discover games, join tournaments with prize money, climb the leaderboard. No build step, no framework.

Ionic ToolKit

HTML 100

All-in-one student toolkit, a PWA

Eight tools - scientific calculator, library, Snake, DSA visualizer, matrix operations, coding platform, AI chat, in-app browser - each in a basic and an advanced version.

Web Media Player

HTML 100

Responsive single-file media player

Playlist controls, playback speed, brightness, keyboard shortcuts and fullscreen, with zero dependencies.

ENGINEERING HIGHLIGHTS

- Built an offline-first AI workspace with nine agents and nineteen local plugins that keeps working with no API key at all. Six test suites and 320+ checks, all passing.
- Wrote a syntax highlighter covering 22 languages from scratch, hardened against XSS and free of any CDN dependency.
- Implemented Reed-Solomon error correction over GF(256) by hand to produce a working QR encoder, versions 1 to 20.
- Generated all geometry, skinning and motion procedurally at runtime, so the WebGL studio ships with no models, no textures and no build step.
- Shipped applications targeting Windows, macOS, Android and the browser, keeping the dependency count at zero.
- Added five interface languages, including right-to-left Arabic layout.
